ALSAFA Heritage Laundry – Technical Summary and Supabase Plan

Draft for review. Nothing in the application has been changed and nothing has been run on any database. Companion file: alsafa_supabase_schema.sql (the full SQL, not executed).

1. Read this first

- **Version reviewed.** I read the published app and compared it with the last version I built. They are identical (one 59 KB HTML file). If you customised a copy somewhere else, those changes are not in this review. Re-publish it or send me that file and I will update this document.
- **No login or permissions exist yet.** Every page and button is open to anyone who opens the app. The Daily reports page mentions a login, but there is none. Branch is chosen from a drop-down.
- **Hosting.** Pages published inside Claude block network calls to other websites, so the app cannot reach Supabase from where it is published now. The same HTML file has to be hosted on an ordinary static host (Netlify, Vercel, Cloudflare Pages or similar).
- **Sample data.** All names, amounts, landlords, cheque numbers and balances come from a built-in random generator. It must be switched off when real data is connected. This is the only code that has to be removed.
- **Missing add forms.** The app cannot add employees, suppliers or branches, and cannot edit or delete most records. Real employees and suppliers must be loaded directly into Supabase (CSV import) unless you want forms for them.

2. Application overview

- One HTML file, plain JavaScript, no framework. All data lives in memory arrays and is lost on refresh.
- Currency AED, displayed in whole dirhams. Dates stored as YYYY-MM-DD text. Light and dark theme. On phones the sidebar becomes a scrolling top menu.
- Ten branches: ALSAFA MAIN, JERNAS, SATWA, BURDUBAI, NDL, AL BARSHA, MIRDIF, AL JADDAF, KARAMA, SALES TEAM.

- Two banks: ENBD and ADCB. Receiving methods: Cash received, POS machine, Bank transfers, Link payment.
- Twelve pages, in this sidebar order: Dashboard, Branch & date view, Daily reports, Cash & banks, Opening balances, Expenses, Suppliers, Employees, Visas & passports, Trade licenses, Rental agreements, Tasks.

3. Pages, forms and fields

3.1 Dashboard

- Controls: Day or Whole month toggle; Date picker (day) or Month picker (month); Previous; Next; Today / This month.
- KPI cards: Sales; Total received; Shop expenses (excl. savings); Head office expenses (excl. savings); Savings; Sales minus expenses; Orders; Cash + bank balance now.
- Cash board: a cash table (opening, cash received, shop expenses, head office paid from cash, closing) and a bank table (opening, POS, transfers, links, head office paid from banks, rent cheques cleared, closing). Before the start date it shows a note instead.
- Needs attention list, Sales by branch bars, Day by day table (month mode only), Branch by branch table.

3.2 Branch & date view

- Filters: Branch (All or one), From, To, quick buttons Today, Yesterday, Last 7 days, Last 14 days.
- Shows: Sales, Total received, Shop expenses, Head office expenses, Savings, Sales minus expenses, Not yet received; receivings split (cash, POS, bank transfers, link payment, orders); daily reports table with totals row (one branch selected: days without a report appear as Report not submitted, up to 92 days); head office expenses table with totals.

3.3 Daily reports

- Form (10 fields): Date, Branch, Total sales, Orders, Cash received, POS machine, Bank transfers, Link payment, Shop expenses, Of which savings.
- Rules: date and sales above 0 required; savings cannot exceed shop expenses; no future dates; one report per branch per day (duplicates are refused, there is no edit).

- After saving it says whether receivings match sales or differ.
- Table: latest 25 reports with a Check column (Matches or Diff).

3.4 Cash & banks (view only)

- Cards: Total cash + banks, Cash in hand, ENBD, ADCB, POS settlements pending, Savings (incl. brought forward).
- Opening balances table and Movements since start (latest 25): daily bank receipts, daily branch cash less shop expenses, head office expenses, cleared rent cheques.

3.5 Opening balances

- Fields: Balances as at (default 30 Sep 2026), Tracking starts on (automatic, next day), POS/transfers/links go into (ENBD or ADCB), cash in hand for each of the 10 branches, ENBD balance, ADCB balance, POS settlements pending, Savings brought forward, opening amount owed to each supplier.
- Buttons: Save opening balances; Clear sample reports, expenses and balances.

3.6 Expenses

- Cards: Shop expenses (14 days), Head office from cash received, Head office from bank, All expenses (excl. savings), Savings.
- Shop expenses per branch (read-only, taken from daily reports).
- Add head office expense: Date, For branch (All or one), Category (Detergent & chemicals, Utilities, Rent, Repairs, Transport, Packaging, Salaries), Amount, Paid from (Cash received, ENBD, ADCB), Note, Mark as saving.
- List (latest 30) with Expense and Savings columns and a Mark as saving / Unmark saving button.

3.7 Suppliers

- Table: Supplier, Supplies, Terms, Owed, Mark paid (sets owed to 0). Cards: Total owed, Active suppliers. No add or edit form.

3.8 Employees

- Cards: Active, On leave, Close to 6 months, Visas cancelled, Monthly payroll (active staff only).

- Update status form: Employee, New status (On leave or Active), Date (not in the future).
- Table: Name, Branch, Role, Status, Passport expires, On leave since, Days on leave, Visa cancels on, Salary per month, Mark on leave / Mark returned.

3.9 Visas & passports

- Cards: Visas expiring in 30 days, Passports expiring in 30 days, Passports under 6 months left.
- Update expiry form: Employee, Document (Visa or Passport), New expiry date.
- Table: Employee, Branch, Status, Visa expires, Visa status, Passport expires, Passport status, Visa cancels (leave limit). Cancelled visas first, then earliest expiry.

3.10 Trade licenses

- Cards: Licences, Expiring within 60 days, Renewal fees due in 90 days.
- Add licence: Branch, Licence no., Authority, Expiry, Renewal fee. Table with Mark renewed (adds one year).

3.11 Rental agreements

- Cards: Rental agreements, Total annual rent, PDCs due in 30 days, Cheques due (count), Bounced cheques.
- Add agreement: Branch, Landlord, Shop / unit, Start date, End date, Annual rent, Number of cheques (1 to 12), First cheque date, First cheque no., Cheques drawn on (ENBD or ADCB); then one editable row per cheque: Cheque no., Bank, Cheque date, Amount, with a total-versus-rent check.
- Cheques due in the next 30 days list with Mark cleared.
- Agreements table: Branch, Landlord, Start, End, Status, Annual rent, PDCs (cleared / total), Next cheque, PDCs button, Renew button.
- Inside each agreement: cheque schedule (change date of a pending or bounced cheque, Mark cleared, Bounced), and Add cheque (no., bank, date, amount).

3.12 Tasks

- Add task: New task, Branch (All or one), Due date. Three columns: To do, In progress, Done. Buttons Start and Mark done. Overdue flag when past due and not done. New tasks are assigned to Unassigned.

4. Calculations

- **Reconciliation:** difference = total sales − (cash + POS + bank transfers + link payment). Zero shows Matches, otherwise the difference.
- **Total received** = cash + POS + transfers + links. **Not yet received** = sales − total received.
- **Shop expenses (excl. savings)** = shop expenses − shop savings. **Head office expenses (excl. savings)** = head office total − items marked saving. **Savings** = shop savings + head office items marked saving.
- **Sales minus expenses** = sales − shop expenses (excl. savings) − head office expenses (excl. savings).
- **Start date** = opening date + 1 day. Balances only count entries on or after the start date.
- **Cash now** = opening cash (sum of branches) + cash received − shop expenses (including savings) − head office paid from Cash received.
- **Bank now (per bank)** = opening balance + (POS + transfers + links, only for the receiving bank) − head office paid from that bank − rent cheques cleared on that bank. Cheques count on their cheque date.
- **Savings total** = savings brought forward + shop savings + head office savings since the start date.
- **Cash board closing figures** = opening (balance the day before the period) + the period's flows.
- **Visa limit for staff on leave** = leave start + 6 calendar months. After that date the visa shows as cancelled. Returning after the limit sets visa cancelled permanently.
- **Visa colours:** red at 30 days or less (or expired), amber at 90 days or less. **Passport colours:** red at 30 days or less, amber at 180 days or less.
- **Rental cheque split:** each cheque = annual rent ÷ number of cheques rounded, last cheque takes the remainder. Cheque k is dated first cheque date + round(12 × k ÷ n) months. Default end date = start + 12 months − 1 day.
- **Renew agreement:** new start = old end + 1 day, new end = one year later, same rent and number of cheques, cheque numbers continue, all cheques reset to Pending.
- **Cheques due in 30 days** = Pending cheques dated within 30 days or already past. **Next cheque** = earliest cheque not cleared.
- **Licences:** expiring within 60 days; renewal fees due = fees of licences expiring within 90 days.

- **Missing reports:** day mode lists branches without a report; month mode counts days so far × 10 branches minus reports received.
- **Needs attention alerts:** missing reports, visas within 30 days, visas cancelled by leave, staff within 30 days of the 6-month limit, passports within 30 days, overdue tasks, licences within 30 days, rental agreements ending within 30 days, bounced cheques, PDCs due within 7 days, amount owed to suppliers.

5. Reports and dashboards

No separate reports section and no export (no CSV, Excel or PDF). The reporting views are: Dashboard (day and month), Branch & date view, Cash & banks movements, and the per-page KPI cards and tables above.

6. User permissions

- **Implemented today:** none. No login, roles, branch restrictions, locking of old reports, or audit trail.
- **Proposed for Supabase (needs your decision):** Phase 1 a single Owner login with full access. Phase 2 optional Branch users who can only see their own branch and add (not edit) their own daily reports. The SQL already contains these rules.

7. Supabase data structure

All amounts are numeric(14,2). All dates are date. Identity columns are bigint. Full column definitions, checks and indexes are in alsafa_supabase_schema.sql.

Table	Purpose	Key columns
branches	The 10 branches	id, name (unique), sort_order, is_active
expense_categories	Fixed 7 categories	id, name (unique)
profiles	Login users and roles	user_id (auth user), full_name, role (owner or branch), branch_id, is_active
opening_balances	One row of settings	as_of_date, receipts_bank, enbd_balance, adcb_balance, pos_pending, savings_brought_forward

Table	Purpose	Key columns
opening_branch_cash	Opening cash per branch	branch_id, amount
daily_reports	One report per branch per day	report_date, branch_id, total_sales, order_count, cash_received, pos_amount, bank_transfer, link_payment, shop_expenses, shop_savings, created_by
head_office_expenses	Expenses paid by head office	expense_date, branch_id (empty = All), category_id, amount, paid_from, note, is_saving, created_by
suppliers	Suppliers and amount owed	name, category, payment_terms, amount_owed, is_active
employees	Staff, visa, passport, leave	full_name, branch_id, role_title, monthly_salary, visa_expiry, passport_expiry, status (Active or Leave), leave_start, visa_cancelled
tasks	Task board	title, branch_id (empty = All), assignee, due_date, status (0 To do, 1 In progress, 2 Done)
trade_licenses	One or more licences per branch	branch_id, license_no, authority, expiry_date, renewal_fee
rental_agreements	Leases	branch_id, landlord, unit, start_date, end_date, annual_rent
pdc_cheques	Cheques of an agreement	agreement_id, cheque_no, bank (ENBD or ADCB), cheque_date, amount, status (Pending, Cleared, Bounced)

Relationships: every branch_id points to branches. pdc_cheques.agreement_id points to rental_agreements and is deleted with it. head_office_expenses.category_id points to expense_categories. profiles.user_id points to Supabase auth users. created_by columns point to auth users.

Database rules (checks): amounts not negative; one daily report per branch and date; shop savings not above shop expenses; future-dated reports refused (Dubai time); leave start required exactly when status is Leave; agreement end after start; owner profiles have no branch and branch profiles must have one.

Not stored (calculated by the app): reconciliation difference, total received, all balances and cash board figures, visa and passport statuses, days on leave, alerts and KPIs. A SQL function app_balances() reproduces the balance maths so you can cross-check the app against the database.

App field to column map (daily reports): d to report_date, b to branch_id, sales to total_sales, orders to order_count, cash to cash_received, pos to pos_amount, tr to bank_transfer, link to link_payment, exp to shop_expenses, sav to shop_savings.

8. Security requirements

- Turn on Row Level Security on every table. The anonymous (not logged in) role gets no access to anything.
- Supabase Auth with email and password. Owner accounts are created by you; set a strong password and enable multi-factor authentication for the owner.
- Owner policy: full access to all tables. Branch policy: read own profile, branches and categories; read and insert only their own branch's daily reports; no edit, no delete, no other tables.
- The browser uses only the public anon key. The service_role key must never be placed in the HTML file.
- Personal data (salary, visa and passport expiry dates) is visible only to the owner. Passport numbers and Emirates ID numbers are not stored.
- Enable daily backups (Supabase Pro includes them) and test a restore before go-live.
- Recommended but not in the current app: an audit log of who changed what, and a way to correct mistakes (see section 10).

9. Implementation plan

1. **Decisions** (section 10). No changes yet.
2. **Test project.** Create a separate Supabase test project and run alsafa_supabase_schema.sql there. Review it first.

3. **Hosting and connection.** Host the same HTML file on a static host. Add the Supabase client library and the project URL and anon key. Add an owner login screen (the one unavoidable addition, because the security rules need a logged-in user).
4. **Data layer.** Remove the random sample generator. On start, load each table into the same arrays and field names the screens already use, so no page layout, form or calculation changes. Replace each in-memory change with a database write (table below).
5. **Real data.** Import branches (already seeded), employees and suppliers by CSV, then enter opening balances, licences and rental agreements with their cheques.
6. **Testing.** Enter a week of real reports, compare the app totals with app_balances(), test every form, then test on a phone.
7. **Go-live.** Switch to the production project, enable backups and multi-factor authentication, give the owner login.

App action	Database operation
Save report	insert into daily_reports
Add head office expense	insert into head_office_expenses
Mark as saving / Unmark	update is_saving
Mark paid (supplier)	update amount_owed to 0
Mark on leave / returned / Update status	update employees status, leave_start, visa_cancelled
Update expiry date	update employees visa_expiry or passport_expiry
Add task / Start / Mark done	insert tasks / update status
Add licence / Mark renewed	insert / update trade_licenses.expiry_date
Add agreement	insert rental_agreements plus its pdc_cheques in one transaction
Renew agreement	update agreement dates, replace its cheques in one transaction
Mark cleared / Bounced, change cheque date, Add cheque	update or insert pdc_cheques

App action	Database operation
Save opening balances	update opening_balances, opening_branch_cash, suppliers.amount_owed
Clear sample reports, expenses and balances	must be removed or limited to the owner, because it would wipe real data

10. Decisions needed from you

1. **Opening date.** You wrote 30 August; the app uses 30 September 2026 for a 1 October start. Which is right?
2. **Hosting** provider for the HTML file.
3. **Logins.** One owner login first, or branch logins from day one?
4. **Employees and suppliers.** Load by CSV once, or add forms inside the app?
5. **Corrections.** At present a wrong report, expense, licence or agreement cannot be edited or deleted. Do you want owner-only edit and delete?
6. **Assumptions to confirm.** Shop expenses are paid from branch cash; rent cheques reduce the bank on the cheque date; POS, transfers and links all go to one bank; people on leave are not paid; 6 months means calendar months.
7. **Clear sample data button.** Remove it, or keep it for the owner only with a confirmation?

When you reply with these, I can prepare the exact connection changes without touching the screens.
